 I just registered for @ITIFdc 1/31 event on what the Trump administration's manufacturing strategy should look like

 @ITIFdc to host 1/31 event on what the Trump administration's manufacturing strategy should look like

Event Summary

If one thing became clear in the weeks following the presidential election, it was that President Trump is serious about growing U.S. manufacturing. But what should that effort look like in practice, and what strategic considerations should guide it? Should federal policy focus narrowly on manufacturing or on traded industries more broadly? Do all manufacturing activities deserve equal treatment, or should the government target its efforts? Should the primary goal be job creation or value creation? Is it realistic to expect manufacturing to "come back" to U.S. shores, or should the focus be on expanding exports?

Please join ITIF for a panel of experts to discuss these and other important questions related to America's manufacturing strategy for the new administration and Congress. ITIF will release a new report outlining ten principles to guide the Trump administration's manufacturing strategy.

A recording will be available following the event. Follow @ITIFdc during the event, and join the conversation using #ITIFmfg.

Speakers

Tom Reed @RepTomReed
Representative (R-NY)
U.S. Congress
Keynote Speaker

Tim Ryan @RepTimRyan
Representative (D-OH)
U.S. Congress
